

TD - Bank transfer (prepayment_invoice)

Standard Prepayment or Invoice

- 1 [Standard Prepayment or Invoice](#)
- 2 [Secure Invoice](#)

these work for the classic invoice and prepayment

- clearingtype=rec
- clearingtype=vor

Usecase	lastname	Behavior
Full payment	Payer	Simulation for a full payment of the requested amount
Underpayment	Underpayer	An incoming payment for 95% of the requested amount is simulated.
Overpayment	Overpayer	An incoming payment for 105% of the requested amount is simulated.
Split Payment	Splitpayer	An incoming payment for 95% of the requested amount is simulated first. Then shortly after a second incoming payment is simulated completing the requested amount.

Secure Invoice

these work for secure invoice or secure direct debit

- clearingtype=rec, clearingsubtype=POV
- clearingtype=elv, clearingsubtype=POD
