

Hosted-iFrame Mode - Table of config autoCardtypeDetection

Attributes and values in object "config.autoCardtypeDetection"

- Attributes and values in object "config.autoCardtypeDetection"

attribute	value																						
supportedCardtypes	Define possible cardtypes that should be accepted by automatic detection, e.g. ["V", "M", "A"]																						
callback	<p>Define a function that is used as a callback-function if result of automatic cardtype detection changes. Detection starts after first 6 digits of the PAN – this is the BIN (Bank Identification Number) of a credit card and the official id for cardtype and origin detection.</p> <p>This callback-function can be used to change highlighting of logos for selected / detected cardtypes.</p> <p>Possible result codes in callback-function:</p> <table border="1"> <thead> <tr> <th>Resultcode</th> <th>Meaning -> Detected for PAN starting</th> </tr> </thead> <tbody> <tr> <td>A</td> <td>see cardtype - definition</td> </tr> <tr> <td>D</td> <td>see cardtype - definition</td> </tr> <tr> <td>J</td> <td>see cardtype - definition</td> </tr> <tr> <td>M</td> <td>see cardtype - definition</td> </tr> <tr> <td>O</td> <td>see cardtype - definition</td> </tr> <tr> <td>P</td> <td>see cardtype - definition</td> </tr> <tr> <td>V</td> <td>see cardtype - definition</td> </tr> <tr> <td>U</td> <td>see cardtype - definition (coming soon)</td> </tr> <tr> <td>?</td> <td>Cardtype not automatically detected</td> </tr> <tr> <td>-</td> <td>Cardtype automatically detected, but not allowed because not in array supportedCardtypes</td> </tr> </tbody> </table> <p>Further cardtypes may be added in future.</p>	Resultcode	Meaning -> Detected for PAN starting	A	see cardtype - definition	D	see cardtype - definition	J	see cardtype - definition	M	see cardtype - definition	O	see cardtype - definition	P	see cardtype - definition	V	see cardtype - definition	U	see cardtype - definition (coming soon)	?	Cardtype not automatically detected	-	Cardtype automatically detected, but not allowed because not in array supportedCardtypes
Resultcode	Meaning -> Detected for PAN starting																						
A	see cardtype - definition																						
D	see cardtype - definition																						
J	see cardtype - definition																						
M	see cardtype - definition																						
O	see cardtype - definition																						
P	see cardtype - definition																						
V	see cardtype - definition																						
U	see cardtype - definition (coming soon)																						
?	Cardtype not automatically detected																						
-	Cardtype automatically detected, but not allowed because not in array supportedCardtypes																						
deactivate	Can be used to preconfigure the config-block and still deactivate automatic cardtype-detection. Possible values: true false																						

- Some browsers do have problems if only "width" or "height" is specified. So if you want to define height or width for an input field, provide always both.
